Notes:

1. Equitrac Professional 5 is fully supported on all hardware platforms compatible with Windows Server 2000 and 2003. The use of Equitrac Professional under virtualization environments such as Virtual Server or VMWare is generally supported and is fully expected to work correctly, as long as such environments fully support the server operating system (e.g. Windows Server 2003), as Equitrac Professional does not make any assumptions about the underlying hardware platforms. Consult your account representative for details. 2. The specifications indicated represent minimum hardware requirements only; high printing volumes and/or large installations may require substantially higher performance hardware. 3. Equitrac Professional 5 Server and Enterprise Server require a dedicated machine or an isolated virtual server. Equitrac Professional 5 Small Firm Edition can also be installed on a dedicated Windows XP SP2 device or a shared server or virtual server.
